TECHNICAL DATA

Adapter Cable: Phoenix Connector to Dual XLR-F

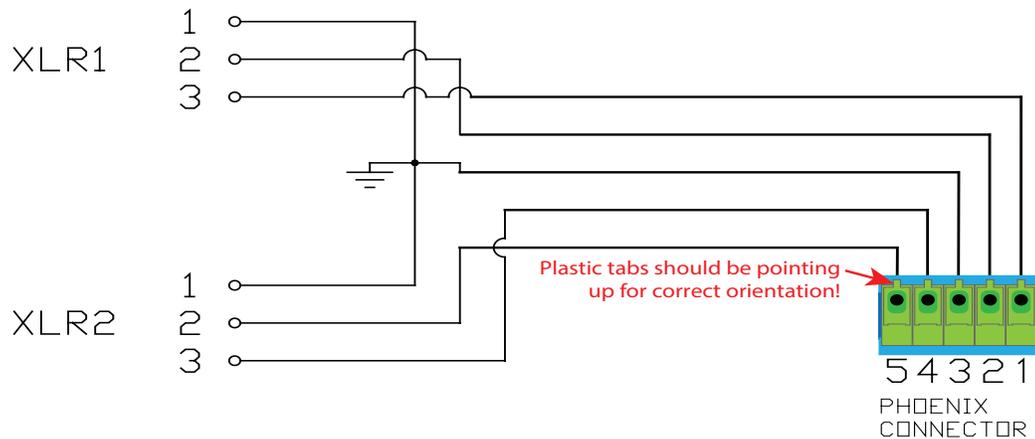

This adapter cable provides a convenient interconnection between an audio source with XLR-M output connectors and the input of a Lectrosonics device with Phoenix connectors. A common use is to connect the output of a Lectrosonics Venue 2 receiver to the DNTBOB88 breakout box to feed a Dante network. Other uses include connecting microphones to Lectrosonics processors.

The rugged assembly is wired in the standard configuration with XLR pin 2 as audio (+), pin 3 as audio (-) and pin 1 as ground. The Phoenix connector is housed in a rugged, 2-part shell.
